

## The Premier Broad-Spectrum Systemic Fungicide

Banner MAXX has become the industry standard broad-spectrum systemic fungicide. It provides superior protection against dollar spot, and with acropetal systemic activity, Banner MAXX moves up the plant to shield the turf from a wide range of tough turf diseases.

### Unprecedented Broad-Spectrum Protection

Banner MAXX delivers superior protection not only against dollar spot, but also against anthracnose, pink and grey snow mould and summer patch. It controls a total of 11 turf diseases - more than any other fungicide registered in Canada.

Target Diseases	Use Rate (mL/100m <sup>2</sup> )	Application Interval (days)
Dollar Spot	26-51	21-28
Anthracnose	26-51	21
Summer Patch	103	30
Fusarium Patch	51-103	30
Leaf Spot & Melting Out	51-103	14
Brown Patch	51-103	14
Red Thread	51	14
Grey Snow Mould	206	Fall Application
Pink Snow Mould	206	Fall Application
Yellow Patch	77-103	Fall Application

### Long Lasting Protection, Up to 30 Days Control

With systemic properties, Banner MAXX won't wash off after it has dried. This rainfast protection results in outstanding control for up to 30 days (depending on label rate and disease pressure).

### Superior Snow Mould Control

Banner MAXX is becoming the snow mould product of choice in Canada as it continues to provide superior results under a variety of harsh winter conditions. The flexibility of application timing, the rainfast protection, residual activity and the ease of application make Banner MAXX the smart choice wherever superior snow mould control is required.

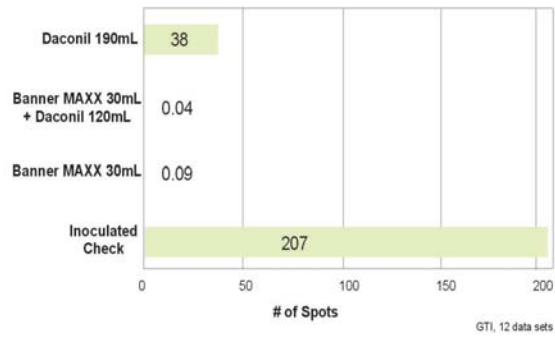

### Long Lasting Summer Disease Control

With low rates, a long residual, a broad spectrum of control, multiple tank mix partners and greater flexibility, Banner MAXX is a key component of summer disease control strategy. The premier systemic defense against dollar spot, anthracnose, summer patch and other tough turf disease helps keep turf in top condition.

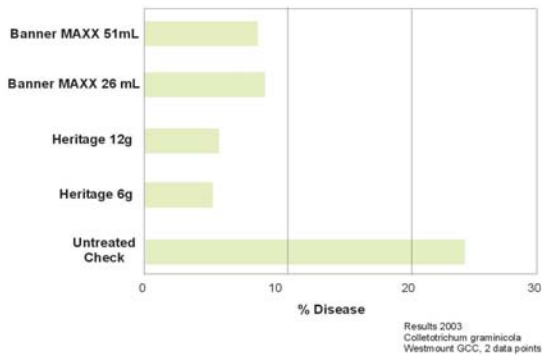

### Innovative MAXX Formulation

Banner MAXX was the first water-based, non-petroleum, liquid fungicide tested for use on turfgrass species - this innovation makes it virtually odour-free. Once mixed in the spray tank, no further agitation is needed. And because of its unique formulation, it won't clog filters.
