

The MAXX family is proud to introduce its newest addition

Heritage is now available in a liquid MAXX formulation. Tank stability, ease of use, odourless and colorless are some of the desirable properties that make MAXX formulations popular amongst superintendents. Add in systemicity, and up to 28 days of protection with Heritage, and you've got the longest lasting control on the market. So, how do you make a good product even better?

Firstly, it's all about efficacy. The active ingredient, azoxystrobin, is more rapidly taken in compared to Heritage WDG, both from the leaf surface and through the roots. This means that the active ingredient is available quicker, thus providing disease protection quicker, a desirable feature for superintendents and their turf, under conditions of high disease pressure.

Secondly, this enhanced uptake, due to the submicron sized particles in the MAXX formulation, has shown enhanced efficacy against diseases such as anthracnose when used preventatively. And that's one tough disease that you need to stay ahead of.

Start out the season with a winner like Heritage MAXX. It'll provide excellent spring control of Fusarium patch, Leaf spot and Anthracnose. When used in conjunction with Subdue MAXX, you'll also be protected against cool season Pythium.

If you have any questions, please do not hesitate to give me a call at (416) 460-4866 or you can contact Engage Agro at 866-613-3336 ext. 236.

Wishing you a successful spring season!
