

DuPont™ Acelepryn® Insecticide

Innovative Technology With Outstanding Performance

There's an effective way to control white grubs and other turf-damaging pests while also minimizing the impact on the environment. DuPont™ Acelepryn® offers a class of chemistry with a mode of action like no other insecticide in the turf market. Trials show that it delivers superior results at the lowest application rate (kg ai/Ha) ever utilized for white grub control and that a single application provides control of a wide variety of other turf insect pests. DuPont™ Acelepryn® combines this performance with the lowest water solubility of any registered grub control product, plus it features an excellent environmental and toxicological profile.

DuPont™ Acelepryn® Insecticide Profile

- Group 28 class of chemistry – anthranilic diamide
- Novel mode of action like no other in the turf market
- Controls every major turf damaging white grub species
- Broad spectrum – controls many pests with just one application
- Excellent environmental and toxicological profile
- Low application rates – kg ai/Ha
- Classified as reduced-risk by the Health Canada Pest Management Regulatory Agency
