

DuPont™ Hyvar® XL herbicide

Broad-spectrum control of annual and perennial weeds as well as many brush species

DuPont™ Hyvar® XL herbicide provides broad-spectrum control of many annual and perennial weeds as well as many brush species. It is an easy-to-use liquid herbicide that does not require specialized application equipment.

Non-crop areas

Apply Hyvar® XL for non-selective weed control on non-crop areas including railways (ballast treatments) or pipeline rights-of-way, lumberyards, storage areas, petroleum tank farms and industrial plant sites. Hyvar® XL also controls undesirable woody plants on utility transmission lines, airports, telecommunication sites, storage areas and other non-cropland sites such as farm buildings and fence lines not immediately adjacent to cropland or desirable trees or shrubs.

Use recommendations

Hyvar® XL can be applied pre-emergent or post-emergent when target species are actively germinating or growing. Best results are obtained when the soil is moist at the time of application. Signs of control will be slow to appear and may not become apparent until moisture carries the herbicide into the root zone of targeted weeds.

Weed Control

Apply Hyvar® XL just before weed emergence or shortly after to control annual and perennial grasses and broadleaf weeds such as crabgrass, foxtail, pigweed, ragweed, quackgrass, wild carrot and dandelion. Apply Hyvar® XL at a rate of 30 L/ha to 45 L/ha. Do not apply when the soil is frozen. Use the higher rates on soils high in organic matter (5% or more) or on clay soils in Eastern Canada.

Retreatment – Apply 17 L/ha to 22 L/ha of Hyvar® XL when weeds and grasses, such as alfalfa, bluegrass, thistle, mullein or aster reappear on sites where weed growth has been previously controlled. For small areas, 450 mL will treat 100 m² (45 mL will treat 10 m²). Apply in sufficient water to obtain thorough coverage.

Brush Control – Apply in spring or summer as a grid or basal (spot) treatment. Refer to the label for complete use instructions.
