

# Floramite™ SC

## ORNAMENTAL MITICIDE

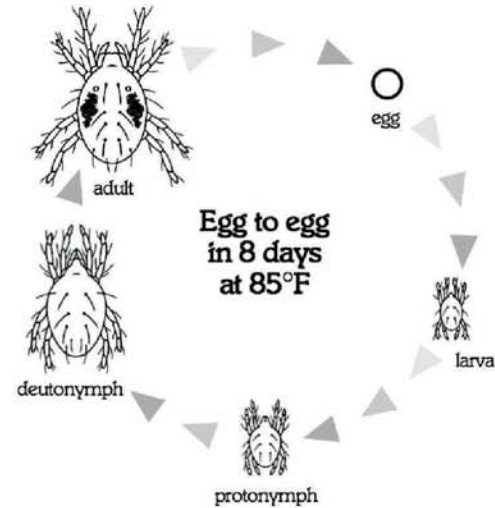

## A Valuable Tool for Mite Control

Floramite SC is a very effective contact miticide that is registered for the Canadian ornamental industry. Floramite SC provides excellent control of spider mites and is the first miticide in Canada to be registered under the "Reduced Risk" program. Floramite SC is an easy to use liquid formulation and is registered for use on ornamentals grown in greenhouses, shadehouses and interiorscapes, and in Christmas tree production.

## Rapid Knockdown - Long Residual

Floramite provides rapid knockdown of targeted mite pests through contact activity, generally occurring within 2-3 days. Floramite is very persistent on plant foliage and, when thoroughly applied to the top and underside of leaves, will provide residual control for up to 21 days. Floramite is most active against motile stages of mites.

## Safe on Beneficials

U.S. Research has shown that Floramite has virtually no impact on honey bees, predacious mites and beneficial insects that are currently being used in commercial greenhouse production. Floramite is ideal for IPM programs.

### Efficacy Against Two-Spotted Spider Mites

Product	Rates (ml or g per 380L)	Cooperator & Location	
		Oetting GA, USA	Smitley MI, USA
		Adjusted % Control 28 DAT	
Floramite	125	92%	97%
Avid	114	86 %	92%
Dyno-Mite	53	98%	67%

Mite Species	Application Rate (ml/100 L)	Remarks
Two Spotted Spider Mite Lewis Mite	33.25	Apply as a full spray to the foliage to obtain thorough coverage. Ensure coverage on underside of leaves for optimum control. Apply as soon as mites appear. Restricted Entry Interval: 12 hrs
Spruce Spider Mite (Christmas Trees)	62.5	LD50 > 5000 mg/kg Use solutions of Floramite SC promptly.

Always read and follow label directions.
