

**TERMINATOR<sup>®</sup> Mouse and Rat Water Resistant Bait**

COMMERCIAL  
FOR LICENSED PEST CONTROL OPERATORS

Mice and Rats consume a lethal dose in a single feeding with dead rodents appearing 1 to 2 days after bait consumption. Rodents cease feeding after consuming a lethal dose in a single feeding. TERMINATOR<sup>®</sup> Mouse and Rat Water Resistant Bait is effective against anticoagulant-resistant mice and rats.

GUARANTEE:  
BROMETHALIN:.....0.01%

REGISTRATION NO. 23761 PEST CONTROL PRODUCTS ACT

**READ THE LABEL AND ATTACHED BROCHURE BEFORE USING  
KEEP OUT OF REACH OF CHILDREN**

Contains BITREX (an extremely bitter tasting substance that has been added to this bait to defer accidental consumption)

**WARNING**

**POISON**

NET CONTENTS: 25 X 28.35g Bait Blocks

**KEEP OUT OF REACH OF UNAUTHORIZED PERSONNEL  
SEE SECONDARY PANEL FOR ADDITIONAL PRECAUTIONS**

Manufactured By  
PM RESOURCES, INC.,  
13001 St. Charles Rock Road,  
Bridgeton, MO 63044

® Registered Trade Mark of Engage Agro Corporation

**PRECAUTIONS:** KEEP AWAY FROM HUMANS, DOMESTIC ANIMALS AND PETS. May be harmful or fatal if swallowed. Avoid contact with skin, eyes and clothing. Wash hands after handling and

before eating, drinking or smoking. Wash contaminated clothing with soap and hot water before reuse. This product is toxic to fish, birds and other wildlife. Keep out of any body of water.

**FIRST AID:** In case of accidental contact, flush eyes or skin with water and wash contaminated clothing. Seek medical attention or call a Poison Control Centre immediately if ingested or if breathing difficulty occurs or irritation persists. Take container, label or product name and Pest Control Product Registration Number with you when seeking medical attention.

**TOXICOLOGICAL INFORMATION:** TERMINATOR<sup>®</sup> Mouse and Rat Water Resistant Bait is not an anticoagulant type of rodenticide. If ingested, limit absorption by either emesis or gastric lavage. Follow immediately with activated charcoal and saline cathartic orally; repeat every 6-8 hours for at least 72 hours. Activated charcoal has been shown to be effective. Animals showing signs of toxicosis should receive supportive therapy - maintain body temperature, respiration and electrolytes. Cortosteroids and osmotic diuretics (mannitol) may be beneficial.

#### **DIRECTIONS FOR USE**

**IMPORTANT:** Do not expose children, pets or other non-target animals to rodenticides. To help prevent accidents:

- Store product not in use in a location out of reach of children and pets.
- Apply bait in locations out of reach of children, pets, domestic animals and non-target wildlife in tamper-resistant bait stations. These stations must be resistant to destruction by dogs and by children, and must be used in a manner that prevents children from reaching into bait compartments and obtaining bait. If bait can be shaken from stations when they are lifted, units must be secured or otherwise immobilized. Even stronger bait stations are needed in areas that are exposed to industrial machines (e.g. fork trucks).
- Dispose of unused and stale bait in accordance with local requirements.

#### **USE LIMITATIONS:**

For control of House Mice (*Mus musculus*), Norway and Roof rats (*Rattus norvegicus* and *Rattus rattus*) in homes, industrial and agricultural buildings, and similar man-made structures. Bait must be placed in tamper-resistant bait stations. Tamper-resistant bait stations must have the following characteristics.

- constructed of high-strength material (e.g., metal or injection-molded plastic) and resistant to destruction by children, non-target animals and, if applicable, heavy industrial machinery (e.g., fork trucks)
- entrance designed so that children and non-target animals cannot reach the bait.
- internal structure, which prevents bait from being shaken loose.
- access panel, which fastens securely and locks (e.g., metal screw lock or padlock).
- capable of being securely fastened to a surface (e.g., nailed down, encased in cement).
- clearly labeled **DANGER POISON**

Do not place tamper-resistant bait stations in areas where there is a possibility of contaminating food or surfaces that come in direct contact with food.

#### **SELECTION OF TREATMENT AREAS:**

Determine areas where mice and rats will most likely find and consume the bait. Generally, these areas are along walls, by gnawed openings, in or beside burrows, in corners and concealed places, between floors and walls, or in locations where rodents or their signs have been seen. Remove as much alternative food accessible to rodents as possible.

**APPLICATION DIRECTIONS:**

Chemical-resistant gloves must be worn while applying this product.

**NORWAY AND ROOF RATS:**

This product is to be used by licensed pest control operators as part of their rodent control program. Apply 2 to 6 TERMINATOR<sup>®</sup> Mouse and Rat Water Resistant Bait blocks per protected placement (tamper-resistant bait stations). Adjust the amount of bait applied to the level of rat feeding expected at each bait placement location. Tamper-resistant bait stations should be spaced at 6 to 9 meter intervals, in locations out of reach of children, pets, domestic animals and non-target wildlife. The number and location of bait stations should be recorded. Place directly in tamper-resistance bait stations; do not remove bait from plastic cups. The bait is not to be placed outdoors or in areas near farm wells or water reservoirs or in areas where there is a possibility of contaminating sources of drinking water.

**HOUSE MICE:**

This product is to be used as part of rodent control program. Apply 1 to 2 TERMINATOR<sup>®</sup> Mouse and Rat Water Resistant Bait blocks per protected placement (tamper-resistant bait stations). Adjust the amount of bait applied to the level of mouse feeding expected at each bait placement location. Tamper-resistant bait stations should be spaced at 2.4 to 3.7 metre intervals, in locations out of reach of children, pets, domestic animals and non-target wildlife. The number and location of bait stations should be recorded. Place directly in tamper-resistant bait stations; do not remove bait from plastic cups. The bait is not to be placed outdoors or in areas near farm wells or water reservoirs or in areas where there is a possibility of contaminating sources of drinking water.

**BAITING STRATEGY:**

Highest bait consumption is expected to occur on the first day or two after treatment. After several days, inspect the tamper-resistant bait stations and replenish bait at sites where there is heavy feeding or where there is continued evidence of rodent activity. Replace spoiled bait if recent rodent activity is apparent. Maintain bait for at least one week and continue baiting until all signs of rodent activity have ceased or it becomes clear that the remaining rats and mice are not attracted to the bait.

Collect and properly dispose of all dead animals and leftover bait. To discourage reinfestation, limit sources of rodent food, water, and harborage as much as possible. If reinfestation does occur, repeat treatment.

Where a continuous source of infestation is present, establish permanent bait stations and replenish as needed.

**STORAGE AND DISPOSAL:**

Do not contaminate water, food or feed by storage or disposal.

**STORAGE:** Store in a cool, dry place away from other chemicals. Store product not in use in a secure location inaccessible to children and non-target animals.

**DISPOSAL:** Licensed pest control operators collect and properly dispose of all dead rodents and leftover bait. Dispose unused, spoiled bait and dead rodents in accordance with provincial requirements. For more information on the disposal of unused, unwanted product and the cleanup of spills, contact the provincial regulatory agency or the manufacturer.

**NOTICE TO USER:** This control product is to be used only in accordance with the directions on this label. It is an offense under the Pest Control Products Act to use a control product under unsafe conditions.

**NOTICE TO BUYER:** Seller's guarantee shall be limited to the terms set out on the label and subject thereto, the buyer assumes the risk to persons or property arising from the use or handling of this product, and accepts the product on that condition.
